

Development Technical Challenge

Your task is to create a .NET MVC web application that will serve as an interface to an existing API. Your solution should:

- Obtain an authorization token against the provided server using the provided credentials.
- Provide an interface for creating bookings.
- Provide an interface for viewing/managing bookings.

Optionally, you can provide additional functionality such as:

- Deleting and editing bookings.
- Checking for room capacity and possibly suggest alternative rooms.
- Anything else you can think of.

Context

This is an open task, feel free to take your time and add any features you think are necessary. We are testing your creativity, ability to foresee flaws in design and technical know-how. Your solution you should emphasize readability, maintainability and attention to detail.

Submit your solution

Submit your solution by logging in to the CanIT system and uploading your files using the interface.

Alternatively, create a public Github repository and push your solution in it. When you're finished, send us the URL to the repository.
